

RITTAL OFFERS THE “KEY“ TO OPTIMUM HYGIENE FOR ALL SECTORS!

The completely new lock insert is synonymous with the consistency of Rittal Hygienic Design. Featuring a high protection category, it has nowhere for micro-organisms to hide, making cleaning easy. The same is true of the entire new product line, in every respect. Rittal Hygienic Design reduces the risk of contamination and significantly increases productivity.

FRIEDHELM LOH GROUP

Benefits in Detail:

Roof angled forwards by 30°. No hidden spots. Cleaning products safely drain away. Avoids the risk of objects being stored on the roof.

Horizontal drainage edge to protect the seal.

Chamfered door fold.

External fastener made from stainless steel and fastener insert easy to clean.

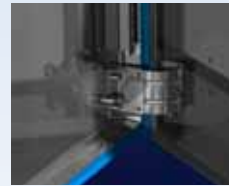

Benefits compared with conventional enclosures:

- Higher productivity
- Reducing the amount of cleaning required
- Superior product quality
- Improved protection for both consumers and employees
- Individually customised solutions, e.g. single doors for machine panels.

Silicone seal around the outside, no gap. Seal may be swapped over. Seal dyed blue to clearly distinguish it from foodstuff.

Hinge inside the enclosure.

Enclosure of all-round solid construction. This means that after machining, only essential openings remain.

No new project planning input required, since the same mounting plate dimensions are used as in AE enclosures.
