

Sensor Tester Only £49.00

With the ability to evaluate all 2, 3 or 4-wire sensors, the LC Automation sensor tester is great value at just £49.00!

It has a compact, palm-sized design and works with any dc capacitive, inductive, ultrasonic or photoelectric sensor.

Operators put sensor wires into push-button terminals and LED's indicate the functions - it really is that easy!

The ST03LCA sensor tester is also protected against incorrect hookup.

It's a great value package!

Features

- Two LED's (npn/pnp) for displaying the switching state
- Suitable for ultrasonic sensors due to the output current of 100mA
- Usable for 2, 3 and 4-wire sensors in npn and pnp-technique as well as NAMUR sensors

Function

The ST03LCA switch testing device is suitable for function testing all 2, 3 and 4-wire pnp and npn DC indicators and for testing NAMUR sensors.

Power is supplied to the sensor via the 0V and 18V terminal. For 3 and 4-wire sensors, the signal line is also applied to the third connection terminal. When the sensor output switches, this is displayed by an LED and indicated as well by a buzzing tone. Because of the high output load of max. 100 mA, ultrasonic sensors or similar devices can also be connected. The automatic On/Off function prevents unnecessary use of energy and makes operation simple.

Technical specification

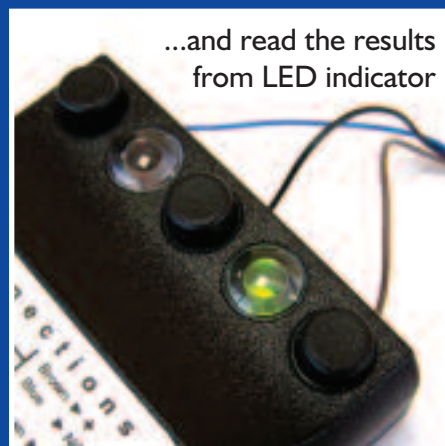

Operating voltage 18V, two 9V-blockbatteries included with delivery

Current loading capacity load current max.

Connection 3 connection terminals for 0V, 18V and signal output
