

Mitsubishi iQ-F Advanced using GX Works2 in simple mode

Two-day training course in Blackburn - £1200 per person

This 2-day course is an advanced training course for the Mitsubishi IQ-F PLC family.

The advanced course will enable engineers to maximise PLC use by using the built in features including analogue channels and additional modules. The course also explores how to use GX Works software and the PLC functionality to accelerate creation of PLC programs.

Price and Availability

See our website for a schedule of our training course dates. To book your places & check availability, please e-mail training@lca.co.uk or call 01254 685900.

The cost for the two day course is £1200 plus VAT per delegate.

The cost includes course documentation and a buffet lunch.

What Does the Course Include?

- Intelligent module selection and configuration
- Built in analogue channels
- High speed inputs
- Module labels
- Program labels and structured data types
- Arrays and indexing
- Controlling access
- Memory management
- Program execution types
- Data and numerical value manipulations

What Skills Do I Need?

- Intermediate level knowledge and experience of IQ-F PLCs and programming and want to develop their skills to an advanced level
- Experience of industrial control systems.
