

Counters

Red Lion offers you the most comprehensive selection of counters in the industry. From a simple switch contact to a more complex dual quadrature signal with communication and control, you can meet any application with precision and ease of operation. Keep size and cost to a minimum with our CUB family of counters or choose the advanced PAX Meters, whose modular design allows you to field-configure them in seconds with plug-in output cards.

Tachometers

Need to display a rate? Our wide choice of indicators helps you display data where it's needed, from linear feet, revolutions, gallons or other measure. Not only can you indicate the rate, control can be achieved by adding outputs and comms to your meter. With various sizes available, you'll find the right tachometer for your application.

Digital Panel Meters

You'll find our Digital Panel Meters throughout industry providing process indication and control. They accept Voltage, Current, Temperature, Process, and Strain Gage inputs, so you can scale them for the engineering unit you need. As a leader in panel meters, Red Lion offers you a choice of size and capability from the CUB family to the highly adaptable PAX series—ready for plug-in field modification using output cards.

Large Displays

Our LPAX and LDD models bring the message into dark, hard-to-see or large-scale environments. With a display height up to 3.32 inches (visible to 130 feet) you can read these displays most anywhere on the plant floor. Offering the same capability as our standard-size devices, including wide choices in capability, display format, and input make these the obvious answer for your next large display requirement.

Timers

From the economy and convenience of our CUBs to the C48 Timers with outputs and comms capability, there's a Red Lion timer to meet your specs. Field-proven design and up-to-the-minute electronics assure you of reliable operation with convenient programmability. These units fulfill your demand for Hour Meters, Elapsed Timers, Real Time Clocks, Process Time and other essential building blocks for cost-effective control.
